

LESSON FRAMEWORKS

The frameworks below are not set in stone but many of the lessons you teach will follow one of these patterns.

Lesson Frameworks

Receptive skills lesson (Reading or Listening)	
STAGE	AIM
Lead-in (<i>could be visuals / discussions / anagram / prediction / questions</i>) relating to the topic of lesson).	To generate interest in the topic and sometimes develop oral fluency.
Set the context (<i>reading / listening</i>) (e.g. tell students about the text, e.g. the genre, who's speaking if it's a listening text etc)	To generate interest in the text, activate schemata and to help students prepare to read or listen
Pre-teach vocabulary	To pre-teach meaning/pronunciation/form of any blocking words necessary for the task(s) to be set.
Prediction Task (only if logical) (e.g. if the text is about a weekend sightseeing in London, students can talk about which sights might be included in the text).	To generate interest in the text, activate schemata and to help students prepare to read or listen
Reading for gist task (initial task) (e.g. students read or listen to the text and decide on the best title for the text or read to check their predictions if a prediction task was included above).	To orientate students to the general content of the text (<i>idea / flavour</i>) and to give them practice in gist reading / listening.
Reading for detail task (second task)	To give students practice at reading or listening for detail to gain more understanding of the text.
Follow on activity (e.g. discussion on the text, role play, write a reply etc)	To exploit the text for speaking or writing to develop fluency.
Note that the order of the pre-teach vocabulary stage is flexible, e.g. it may be more logical/natural to teach it in the lead in or before the reading for detail task as the vocabulary may naturally come up here. It's also possible to teach a couple of words before the gist task and then a few more before the detail task. Ensure the students know why you're teaching the vocabulary! E.g. say, 'Before we listen to the two friends talking, let me help you with some vocabulary', to help you transition between those stages.	

Writing (using a modal text)	
STAGE	AIM
Lead-in (<i>could be visuals / discussions / anagram / prediction / questions</i>) relating to the topic of lesson).	To generate interest in the topic of the writing text or something related.
Presentation of model text with a gist task (e.g. Provide an extract from a blog and students decide if the writer is describing a good holiday or a bad holiday and where it's from).	To orientate students to model text and to provide a model of text type. The gist reading allows Ss to read first for meaning before focussing on language.
Focus on sub-skills (e.g. layout, vocabulary, fixed expressions). Focus on anything here that will help students when they come to write a similar text themselves.	To focus on sub-skills of writing.
Brainstorming / Preparation for writing (e.g. help students generate ideas about what to write. Use the model text here to help, a visualisation etc)	To generate ideas and to help students prepare to write.
Writing Stage Depending on what kind of writing task this is, the students can do this individually or in pairs. Teacher monitors to provide help during this task.	To give students practice at writing with a focus on meaningful communication.
Content feedback (e.g. students read each other's work and comment on the content (ideas) of the written work, e.g. if students read each other's blog, they decide whose holiday sounds the most interesting).	To provide content feedback to writing to make it communicative.
Language feedback	To provide language feedback to writing. (On the CELTA course the language feedback is given during monitoring while sts are writing and then in OCFB, when you might highlight a few common errors. After the CELTA, you might correct the sts' writing out of class, as well as helping in class).

Speaking	
STAGE	AIM
Lead-in / Set context for speaking (<i>could be visuals / discussions / anagram / prediction / questions</i>) relating to the topic of lesson).	To generate interest in the theme and context for speaking.
Language Input (e.g. functions, vocabulary, grammatical structures from model or from teacher).	To generate the language for the speaking task.
Content preparation (e.g. listen to a model, brainstorm, note-taking).	To allow students time to generate ideas.
Speaking	To give students the opportunity to develop their oral fluency skills.
Content feedback (e.g. "show/demo" or "tell")	To give students the opportunity to share their speaking task output with the class.
Language feedback	To give an opportunity to feedback on good and bad language (On the CELTA course, the language is collected during monitoring, while sts are speaking, and then given in OCFB, when you might highlight a few common errors. After the CELTA, you might correct the sts' writing out of class, as well as helping in class).

Test-Teach-Test Grammar Approach	
STAGE	AIM
Lead-in (e.g. students discuss questions relating to the topic of lesson)	To generate interest in the topic of the lesson and develop oral fluency.
Test (diagnostic) (e.g. SS do gap-fill, definition-matching, categorising etc)	To ascertain what language students know and what they don't know.
Teach / Feedback/ Language clarification (e.g. do feedback to test and clarify and check meaning of problematic language, pronunciation and drill, highlight form – students should be given a written record of target language, e.g. copy from the board). This is usually best done while checking answers to the diagnostic test and not as a separate stage.	To feedback on the first test and to teach problem areas clarifying meaning, form and pronunciation of target language.
Test / Controlled practice of target language (e.g. students rank vocabulary, answer questions using the vocabulary, do a gap fill, transform sentences, write true sentences about themselves, etc)	To provide students with controlled practice at using the target language (with a focus on accuracy) and to see what students now know and help them with problems they still have.
Freer practice of target language (e.g. discussion on topic, role-play etc) Content feedback Language feedback	To provide students with practice at using the target language in a freer way with a focus on meaningful communication. To let the students share in open class what they've been talking about to develop fluency. To focus on good language heard, error correction and upgrade with useful language.

Situational Grammar Presentation (Presentation-Practice-Production)	
STAGE	AIM
Lead-in (e.g. students discuss questions relating to the topic of lesson)	To generate interest in the topic of the lesson and develop oral fluency.
Present target language (e.g. through a story, anecdote etc) Elicit target language.	To present the target language in a context.
Language clarification (e.g. check meaning using your context, focus on pronunciation by modelling and drilling, highlight form and aspects of pronunciation on the board – to give students a written record of target language)	To clarify the meaning, form, pronunciation of target language.
Controlled practice of target language (e.g. students rank vocabulary, answer questions using the vocabulary, do a gap fill, transform sentences etc)	To provide students with practice at using target language in a controlled way with a focus on accuracy.
Freer practice of target language (e.g. discussion on theme, role-play etc. This will often be personalised) Content feedback Language feedback	To provide students with practice at using the target language in a freer way with a focus on meaningful communication. To let the students share in open class what they've been talking about to develop fluency. To focus on good language heard, error correction and upgrade with useful language.

Text-Based Grammar Presentation	
STAGE	AIM
Lead-in (e.g. students discuss questions relating to the topic of the lesson)	To generate interest in the topic of text/lesson and develop oral fluency.
Orientate students to text (e.g. tell students about the text, students predict content etc).	To generate interest in the text, activate schemata and to help students prepare to read or listen
Pre-teach vocabulary	To pre-teach meaning/pronunciation/form of any blocking words necessary for the task(s) to be set.
Present text (listening or reading) with a gist task and/or /detail reading task.	To orientate students to the overall content of the text
Brief follow on (e.g. students respond personally to what they've just read or talk further on the topic).	To exploit the text for speaking.
Focus on language from text (e.g. clarify and check meaning of target language in the text using the context, pronunciation and drill, highlight form and aspects of pronunciation on the board).	To clarify the meaning, form, pronunciation of target language.
Controlled practice of target language (e.g. students rank vocabulary, answer questions using the vocabulary, do a gap fill, transform sentences, write true sentences about themselves, etc)	To provide students with practice at using target language in a controlled way with a focus on accuracy.
Freer practice of target language (e.g. discussion on topic, role-play etc)	To provide students with practice at using target language in a freer way with a focus on meaningful communication.
Content feedback	To let the students share in open class what they've been talking about to develop fluency.
Language feedback	To focus on good language heard, error correction and upgrade with useful language.

Guided discovery	
STAGE	AIM
Lead-in	To generate interest in the theme of target language
Present the language – usually in a written text and with a gist/detail reading task.	To orientate students to the overall content of the text
Guided discovery stage (e.g. students work through a handout with questions relating to meaning, form and (sometimes) pronunciation of target language). Students can do this individually/pairs and it's student-centred rather than teacher led. Teacher monitors and notices problematic areas to focus on in the next stage.	To guide students to the meaning, form and pronunciation of target language using an inductive approach.
Feedback / Language clarification	To elicit and confirm answers and clarify problem areas on meaning, form and pronunciation where necessary. Here, be careful that you don't then do a full board presentation of the language as that means double clarification!
Controlled practice of target language (e.g. students rank vocabulary, answer questions using the vocabulary, do a gap fill, transform sentences, write true sentences about themselves, etc)	To provide students with practice at using target language in a controlled way with a focus on accuracy.
Freer practice of target language (e.g. discussion on topic, role-play etc)	To provide students with practice at using target language in a freer way with a focus on meaningful communication.
Content feedback	To let the students share in open class what they've been talking about.
Language feedback	To focus on good language heard, error correction and upgrade with useful language.

Guided discovery/student centred-clarification isn't really a framework for a complete lesson, but rather a student-centred clarification stage. So, students work with examples of the language themselves/in pairs and answer Qs about the language from a handout, rather than the teacher focussing on the target language at the board. It's possible to do a guided discovery section for just parts of the MPF. It's important that Ss have sufficient examples of the target language to be able to see patterns (for form) and to be able to work out the meaning from the context. That's why a reading text is especially useful for this kind of clarification. It's more useful for tenses/structures than vocabulary.
